The Game Security Development team develops solutions that help Ubisoft maintaining the integrity of its games. To be tackled security risks can cover a wide range such as cheating, server-security and information disclosure. The backend developer works on maintaining, managing, and extending the custom C++ backend solution, as well as developing new solutions to facilitate analytics and operations.

Your primary objective as Backend Developer in the game security field is to develop and improve the online part of new and/or existing security solutions that'll be used directly or indirectly by our game development teams to maintain the security of their games.

Tasks

- Actively participate in planning, designing, developing and testing the solutions.
- Evaluate and select tools and technology for new features or improvements.
- Perform load tests and optimize bottlenecks.
- Actively work on the deployment and live operation processes for our online backend.
- Improve security and resilience of the existing systems.
- Connect the existing backend to other online systems within Ubisoft
- Integrate databases where needed.
- Acquire knowledge of the online part of existing anti-cheat and anti-piracy solutions.
- Collaborate with other team members for adapting the online services to specific requirements.
- Good knowledge of C++

- Systematic and pragmatic mindset
- Proficiency in oral and written English
- Experience in developing scale-able online systems
- Experience with SQL and No-SQL databases, including data-modeling and administration
- Experience in programming robust and efficient code
- Autonomous
- Comfortable working in Agile/Scrum/Kanban methodologies
- Minimum of 2 years of professional experience in a software development field
- Bachelor or Master degree in computer science or any other relevant discipline is a plus

Desirable skills and knowledge

Good understanding of:

- Common vulnerabilities and exploitation methods of online services
- Common constraints and limitations of multiplayer/online games
- Continuous integration and automated deployment
- Cloud-hosted infrastructure
- Asynchronous patterns
- Reverse engineering is a plus
